

Innovative bandage aid - let's individualize!

Prototypes available!

Problem

Current bandage applicators are heavy and/or inflexible. They are standard aids, often for 1 finger only and they are not really user-friendly.

Solution

*TRIpod** enables dressing for one or more fingers, small or large and is easy2adapt! *TRIpod* can be tailored for individual patient needs!

Properties

TRIpod is a lightweight finger tubular dressing applicator. The 3 arms of the *TRIpod* can easily be adapted based on the individual ergonomic need of a patient. The pivot point of *TRIpod* offers good grip for the needed twists to apply the bandage, e.g. gauze.

[Video TRIpod](#)

Application

TRIpod is an ergonomic and adaptable bandage aid that is easy to use by medical professionals as well as by patients themselves. After a short introduction, every patient is thus able to carry out the daily dressing change independently.

Markets

Marketing service-offering, give-away, LCM for bandage companies. Reimbursed medical device in some regions, e.g. France.

Patentstatus

European Patent Application 21 180 154.3
„A finger bandage aid, a use for said finger bandage aid and a process for the provision of said finger bandage aid“

Inventor

Dr. Marco Guidi, MD, hand surgeon FEBHS, orthopedic surgeon at the University Hospital of Zurich
